A: The correct way to use AI in college is to use it as a tool to help with learning, not to replace your own work. Students can use AI to better understand assignments, come up with ideas, or get easy help when they are stuck. If students use AI this way, they are still learning and completing the important parts of their work themselves. Students should also make sure the information AI gives them is correct before using it. It is important to follow each professor's rules because classes may have different guidelines for AI. Students should never use AI to cheat or take credit for work they did not do. AI should make learning easier without taking away from actually understanding the material. So, when AI is used correctly, it can be a useful resource throughout college.

CHATGPT RESPONSE: Yes, I agree with it. I think the main point is really good: **AI should support your learning, not replace it.**

I especially agree with these points:

- Using AI to understand something you are confused about can actually help you learn.
- Students should check AI's information because it can sometimes be wrong.
- Following each professor's AI rules are important since every class can have different expectations.
- Using AI to do an assignment for you or submitting AI work as your own takes away from the learning process.

Overall, your last sentence sums it up well: **AI should make learning easier without taking away from actually understanding the material.**

B: The incorrect way to use AI in college is to let it do all of your work for you. Students should not use AI to write an entire assignment and then turn them in as their own work. Using AI to cheat on quizzes, tests, or other assignments is not the correct use of AI. Students should avoid copying AI responses without reading or understanding the information. AI can also provide incorrect information so trusting everything it says can lead to mistakes. Using AI when a professor has specifically said it is not allowed can also cause issues. The purpose of college is to learn and develop your own skills, not have AI replace them. Using AI responsibly helps students avoid these issues while still benefiting from the technology.

CHATGPT RESPONSE: Yes, I think this is correct. You clearly explain the main ways AI should **not** be used in college, especially for cheating or replacing your own work.

I also like that you mention **understanding the information** and **following your professor's rules**, because those are important parts of responsible AI use. Your last two sentences also connect back to the main idea really well.

One small grammar fix: **“write an entire assignment and then turn them in”** should be **“write an entire assignment and then turn it in.”** Other than that, I think your response is clear and makes sense.
